

**I'm here representing Paladin InfoTek. Paladin is an IT service provider specializing in Managed IT Services. We focus on small businesses with 3-25 PCs and any number of servers. We provide fixed price service and support plans that keep your computers running smoothly and include backup & disaster recovery techniques that protect your critical data and provide you with quick recovery from data loss due to equipment/software failure or natural or man-made disasters. All of our plans also include remote and phone support at no additional cost.**

**A good referral for us would be a business that depends on their computing systems but does not have in-house IT staff or a dependable service provider. So, for same day service from professional and experienced experts with no long term contracts, call Paladin InfoTek.**

**Our tag line "technology is everywhere, we make it work."**
